## DETAILED ACTION

### *Specification*

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The current title of the invention is misleading as it discloses a machine for removing sump pit water and **process for making same**. There is no process disclosed for making the machine, it rather discloses a process for removing water from the sump pit.

### *Drawings*

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the machine, sump ejector, suction line, internal check valve, atmospheric vent etc. must be properly labeled and shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for

consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Claim Objections***

Claims 1 and 2 are objected to because of the following informalities: sump ejector and sump ejector system, it is not clear what is the difference between the two. Claim 1 line 3 seems to be an incomplete sentence. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1 and 2 recites the limitation "the discharge pipe" in line 2. There is insufficient antecedent basis for this limitation in the claim.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 3746

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Peters (U.S. 3,726,606).

Peters discloses a machine (sump apparatus as shown in figure 1 and 2) for removing sump pit water comprising: sump ejector (30, 54) mounted at the same elevation as the discharge pipe (40), sump ejector system (30, 54) with an adjustable timing control allowing the pump to run for various lengths of time (72), an independent discharge line (40, 42, 44, 46 and 48); sump ejector (30) with an independent suction line (56); sump ejector with an internal check valve (60); sump ejector with a atmospheric vent (48) preventing backflow; and sump ejector with integral backflow prevention device (combination of 40, 42, 60 and 48).

With regard to claim 2 it should be noted that the prior art structure as disclosed by Peters is capable of performing the intended process as claimed in claim 2.
